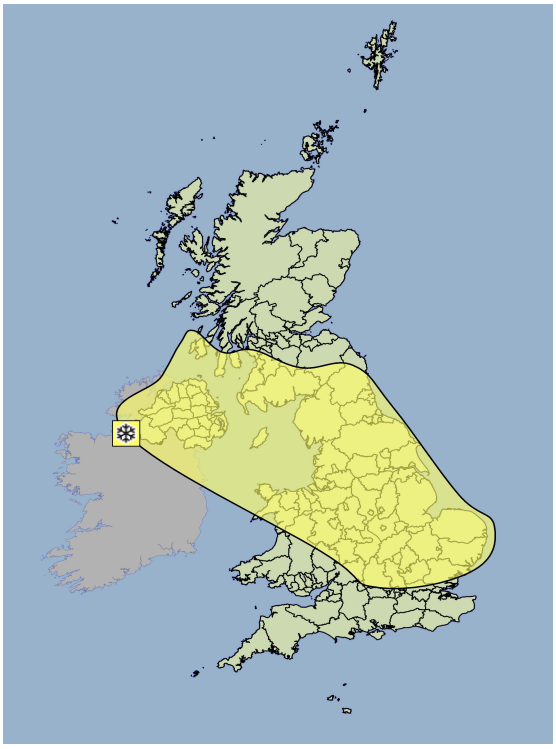
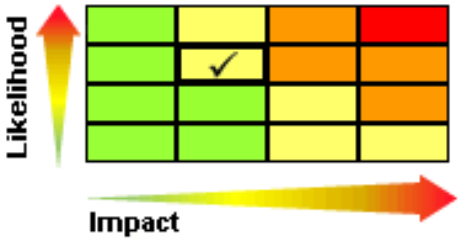
National Severe Weather Warning Service





Chief Forecasters Assessment
A frontal system will remain slow-moving across central and northwestern parts of the UK during Saturday, slowly weakening though capable of giving fresh accumulations into the night time period. A lot of snow has fallen in places across the region, and for many areas, especially northern England, Scotland and Northern Ireland, extra accumulations will be insignificant compared with what has already fallen.

The Met Office have issued a **Yellow Warning** of **Snow**

Valid from **00:05 on Sat, 23rd Mar 2013** until **23:59 on Sat, 23rd Mar 2013**

A slow-moving band of rain, sleet and snow will continue to affect many central parts of the UK during Saturday. Further accumulations of more than 5 cm are likely in places, with continued drifting of lying snow on strong easterly winds, mainly on hills. Ice will become the most widespread hazard, especially this evening.

The public should be aware of the continued risk of disruption.
